PROFESSIONAL SUMMARY

AWS Certified Solutions Architect and AWS Community Builder with hands-on experience in cloud infrastructure, CI/CD pipelines, and DevOps automation. Proficient in Docker, Kubernetes, Terraform, Ansible, and AWS services including EC2, S3, VPC, IAM, and RDS. Passionate about building resilient, automated systems that improve operational efficiency and accelerate software delivery.

PROFESSIONAL EXPERIENCE

AWS Solutions Architect – Apprentice | Adex International Pvt. Ltd. • Nov 2025 – Dec 2025

- Completed 18-module AWS Solutions Architect Associate program covering IAM, VPC, EC2, serverless, containers, storage, databases, and high availability, aligned with the AWS Well-Architected Framework, with 30+ guided and challenge hands-on labs.
- Designed secure, scalable cloud architectures spanning Auto Scaling, Load Balancing, disaster recovery, cost optimization, and loosely coupled microservices using SQS, SNS, and EventBridge.

System Administrator – Intern | Datahub Nepal Pvt. Ltd. • May 2025 – Jul 2025

- Administered Windows and Linux cloud servers for 10+ clients, handling VPC creation, subnetting, and compute resource scaling (CPU, memory, disk) while tracking infrastructure health via Zabbix to meet SLA targets.
- Diagnosed and resolved server outages, network connectivity failures, and performance incidents; performed hands-on administration of VMware ESXi hypervisors, Fortigate firewalls, and Pure Storage arrays.

DevOps Engineer – Trainee | Broadway Infosys Pvt. Ltd. • May 2025 – Jul 2025

- Gained practical expertise in Linux system administration, networking, Git, RDBMS, and security fundamentals, with hands-on application in Docker containerization, Kubernetes orchestration, and Jenkins CI/CD pipelines.
- Streamlined infrastructure provisioning across 5+ servers using Ansible playbooks and Terraform IaC, cutting manual setup time and ensuring environment consistency across development and production stages.

KEY PROJECTS

Centralized Monitoring, Logging & Alerting System

- Architected a Dockerized observability platform using Prometheus, Grafana, Loki, and Alertmanager, enabling rapid multi-node deployment across 5+ servers with centralized .env-driven configuration.
- Integrated AWS S3 for log archiving, EC2 Service Discovery for zero-touch target onboarding, and deployed 6 exporters (Node, cAdvisor, Nginx, MongoDB, Jenkins) with custom Grafana dashboards and email alerting.

CI/CD Pipeline via Jenkins for MERN & PHP Applications

- Built end-to-end CI/CD pipelines using Jenkins to build, test, and deploy MERN and PHP applications, reducing deployment time by eliminating manual steps; used Nginx as reverse proxy and Ansible for post-deploy configuration.

Multi-Master Database Clustering (MariaDB Galera & MySQL Replication)

- Established MySQL Master-Slave replication for read scalability across 2 nodes, and built a 3-node MariaDB Galera Cluster with synchronous active-active replication achieving zero data loss and automatic node recovery.

Infrastructure as Code with Terraform (AWS & Azure)

- Provisioned AWS EC2 instances, VPCs, security groups, and Azure VMs using Terraform modules, cutting provisioning time from hours to minutes with reproducible, version-controlled infrastructure across 2 cloud providers.

Scalable & Highly Available Web Infrastructure on AWS

- Engineered fault-tolerant Multi-AZ web infrastructure using Auto Scaling Groups, Application Load Balancer, AWS Certificate Manager, and CloudWatch-driven scaling policies, achieving high availability across 2+ availability zones.

Enterprise Linux Storage Management with LVM & NFS

- Applied LVM to manage dynamic server storage, migrating /var/log to a dedicated logical volume to prevent root partition saturation; deployed centralized NFS file sharing across 3+ Linux servers with subnet-restricted access controls.

Secure Multi-Protocol Remote Access with Cloudflare Tunnel

- Established Cloudflare Tunnel with persistent systemd services to securely expose SSH, RDP, and Node.js services with zero open inbound ports, enforcing zero-trust network access with custom domain routing.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, IAM, RDS, Lambda, CloudWatch, ALB, CloudFormation, SQS, SNS, DynamoDB, Secrets Manager), Microsoft Azure

Containers & Orchestration: Docker, Docker Compose, Kubernetes

IaC & Automation: Terraform, Ansible, Bash Scripting, n8n

CI/CD: Jenkins, GitHub Actions, Git, Webhooks

Observability & Monitoring: Prometheus, Grafana, Loki, Alertmanager, Grafana Alloy, Zabbix

Networking & Security: Linux (Ubuntu, AlmaLinux, Rocky), Subnetting, NAT, VPC, Firewall, SSL/TLS, Nginx, Cloudflare, DNS, Fortigate

Databases: MySQL, MariaDB (Galera Cluster), MongoDB, Amazon RDS

Storage & Virtualization: LVM, NFS, AWS S3, VMware ESXi, Pure Storage

EDUCATION

Bachelor in Computer Applications | JMC College, Tribhuvan University | • 2020 – 2025

- Completed 3 major projects: Dictionary Application, Pong 2D Android Game, and HAMRO BANK — a signature forgery detection system using machine learning for banking security.

Higher Secondary Education (Science) | Pentagon International College | • 2018 – 2019

- Studied Physics and Mathematics in the Science (Physical Group) stream.

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Solutions Architect – Associate (SAA-C03) | Amazon Web Services | 2025
- AWS Community Builder | Amazon Web Services | 2025
- LFS167: Introduction to Jenkins | The Linux Foundation
- LFS101: Introduction to Linux | The Linux Foundation
- Networking Basics | Cisco
- DevOps Engineer Certification | Broadway Infosys
- 2nd Place – AWS Secure the Cloud Quiz Competition | 2025
- 1st Runner-Up – MSS Science Exhibition | 2074 B.S.
